

Companies don't hire you for answers *anymore.*

AI has commoditized the ability to retrieve information. The market rate for raw knowledge is now approaching zero. Here is what they are paying for instead.

SWIPE →

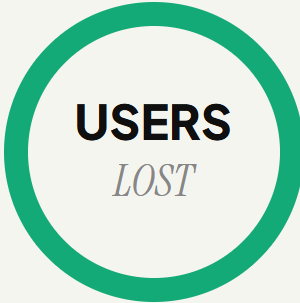

COMMODITIZED KNOWLEDGE

Answers are cheap. Taste and judgment *are rare..*

A developer spent months building features while ignoring the onboarding flow.

When an AI can pass the bar exam, diagnose a disease, and write boilerplate code in seconds, the value of memorization drops. You are no longer competing on what you know.

The prompt is
the new *blueprint*.

The person who can frame the right problem, define the boundary conditions, and ask the sharpest questions is the one commanding the premium.

MARKET TRENDS

Executives admit they are shifting *budgets*.

They moved the sign-up prompt to after the first action.

Recent surveys show 80% of hiring managers are pivoting from hard technical screening to behavioral judgment screening.

**Stop selling
your hard *skills*.**

Instead of listing the coding languages or frameworks you know, start building a portfolio of complex problems you diagnosed and solved. Sell the judgment.

80%

Taste cannot be safely *outsourced..*

Simplify the entry. Delay the
payment.

AI gives you the options. A human must still decide which
option aligns with the company's risk profile, brand, and
strategy.

Fix your onboarding. Multiply your *conversions*.

Complexity won't save a product if users get stuck at the front door. Focus on user flow first.
